FUNCTION: Pore-forming (alpha) subunit of voltage-gated potassium channel. Elicits an outward current with fast inactivation. Channel properties may be modulated by CAMP and subunit assembly. SUBUNIT: The potassium channel is probably composed of a home- or heterotetrameric complex of pore-forming alpha subunits that can sascolate with modulating beta subunits.
SUBCELUIAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Detected only in brain, in particular in the telencephalon. Detected in the cerebral cortex, occipital pole,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Res. 6:337-345(1999).

                             caudate nucleus.
DOMAIN: The segment S4 is probably the voltage-sensor and is
characterized by a series of positively charged amino acids at
                                                                                                                        -1- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
-1- SIMILARITY: Contains 1 PAS (PER-ARNT-SIM) dimerization domain.
-1- SIMILARITY: Contains 1 PAS-associated C-terminal (PAC) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Transport; Ion transport; Ionic channel; Voltage-gated channel; Potassium channel; Transmembrane;

Channel Elicits an outward current with fast inactivation.

Channel Elicits an outward current with fast inactivation.

Channel Properties may be modulated by CAMP and subunit assembly.

Channel Properties may be modulated by CAMP and subunit steat can associate with modulating beta subunits.

Channel Elicits an outward current with fast inactively composed of a homo-ox heterotetrameric complex of force-forming alpha subunits that can associate with modulating beta subunits.

Channel Elicits an outward modulating beta subunits.

Channel Elicits an outward modulating beta subunits.

Channel Elicits an outward modulating beta subunits.

Channel Properties may be modulated pha subunit stat can associate with modulating beta subunits.

Channel Elicits an outward phannel subunits.

Channel Elicits and outward phannel subunits.

Channel Elici

"A novel membrane potential-sensitive fluorescent dye improves cell-based assays for ion channels.";
J. Biomol. Screen. 7:79-85(2002).
-!-FUNCTION: Pore-forming (alpha) subunit of voltage-gated potassium channel. Elicits a slowly activating, outward reclifying current. Channel. Elicits as we medulated by CAMP and subunit assembly.
-!-SUBUNIT: The potassium channel is probably composed of a homo- or heterotetrameric complex of pore-forming alpha subunits that can

SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
SIMILARITY: Contains 1 PAS (PER-ARNT-SIM) dimerization domain.
SIMILARITY: Contains 1 PAS-associated C-terminal (PAC) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bukaryota, Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

DOMAIN: The segment 84 is probably the voltage-sensor and is characterized by a series of positively charged amino acids a every third position.
SIMILARITY: Belongs to the potassium channel family. H (Eag)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Æ.

Saganich M.J., Machado E., Rudy B.;
Saganich M.J., Machado E., Rudy B.;
Toliferential expression of genes encoding subthreshold-operating
RT voltage-gated K+ channels in brain.";
J. Neurosci. 21:4609-4624 (2001).
C. --- FUNCTION: Pore-forming (alpha) subunit of voltage-gated potassium channel. Blicits a slowly activating, outward rectifying current.
CC channel. Blicits as slowly activating, outward rectifying current.
CC --- FUNCTION: Pore-forming (alpha) subunit assembly.
CC --- SUBMUNIT: The potassium channel is probably composed of a homo- or heterotetrameric complex of pore-forming alpha subunits that can associate with modulating beta subunits.
CC --- SUBCELLULAR LOCATION: Integral membrane protein.
CC --- SUBCELLULAR LOCATION: Integral membrane protein.
CC --- TISSUE SPECIFICITY: Detected in superior cervical, mesenteric and cubercle, cerebral cortex, hippocampus pyramidial cells and dentate gyrus and basal gangla of caudatc/putamen and accumbens collact gyrus and basal gangla of caudatc/putamen and accumbens collacterized by a series of positively charged amino acids at cross anticamily.
CC --- SIMILARITY: Belongs to the potassium channel family. H (Eag)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. Potassium voltage-gated channel subfamily H member 8 (Ether-a-go-go-like potassium channel 3) (ELK channel 3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 subfamily.
--- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
--- SIMILARITY: Contains 1 PAS (PER-ARNT-SIM) dimerization domain.
--- SIMILARITY: Contains 1 PAS-associated C-terminal (PAC) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE SPECIFICITY.

Biol. Chem. 274:25018-25025(1999).

2. -1- FUNCTION: Pore-forming (alpha) subunit of voltage-gated potassium channel. Blicits an outward current, but showns no inactivation. Channel. Blicits an outward current, but showns no inactivation. Channel Expertises may be modulated by CAMP and subunit assembly.

2. -1- SUBUNIT: The potassium channel is probably composed of a homo-or heterotetrameric complex of pore-forming alpha subunits that can associate with modulating beta subunits.

2. -1- SUBCELLULAR LOCATION: Integral membrane protein.

3. -1- TISSUE SPECIFICITY: Detected only in brain, in particular in the telencephalon. Detected in putamen and caudate nucleus, and at lower levels in cerebral cortex, occipital and hippocampus.

3. -1- DOMAIN: The segment S4 is probably the voltage-sensor and is characterized by a series of positively charged amino acids at every third position.

3. -1- SIMILARITY: Belongs to the potassium channel family. H (Eag)

-i. DOMAIN: The segment S4 is probably the voltage-sensor and is characterized by a series of positively charged amino acids at every third position.
-i. SIMILARITY: Belongs to the potassium channel family. H (Bag)
                                                                                                                                                                                                                         -!-SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
-!-SIMILARITY: Contains 1 PAS (PER-ARNT-SIM) dimerization domain.
-!-SIMILARITY: Contains 1 PAS-associated C-terminal (PAC) domain.

Heteromultimer with sasociate with modulating beta subunits. Heteromultimer with KCNH6/ERG2, KCNH7/ERG3, KCNH5 [By similarity).

SUBCELJULAR LOCATION: Integral membrane protein.

TISSUE SPECIFICITY: Highly expressed in left and right atria of the heart, in cortex and hippocampus; detected at intermediate the heart, in cortex and hippocampus; detected at intermediate levels in left and right ventricle, Purkinje fibers, cerebellum, thalamus and basal ganglia; detected at low levels in liver, spleen and kidney.

DOMAIN: The segment 84 is probably the voltage-sensor and is characterized by a series of positively charged amino acids at

TO SHOED F., Malykhina A., Akbarali H.I.;

Shoeb F., Malykhina A., Akbarali H.I.;

The shoet muscle KCKH2 erg potassium channel.";

Submitted (JUL-2002) to the EMBL/GenBank/DDBU databases.

LI SUBMITTION: Pore-forming (alpha) subunit of voltage-gated inwardly rectifying potassium channel. Channel properties are modulated by CAMP and subunit assembly. Mediates the rapidly activating component of the delayed rectifying potassium current in heart (IKr) (By similarity).

C. ISUBUNIT: The potassium channel is probably composed of a homo- or heterotetrameric complex of pore-forming alpha subunits that can associate with modulating beta subunits. Heteromultimer with KNHH/ENG2, KCNH7/ENG3, KCNH7/ENG3, KCNH7 and KCNH2 and RCNNE2 (By similarity).

C. ISUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isodd=035219-2; Sequence=VSP_000969;
